

p5.js Web Editor

p5.js Web Editor

The p5.js Web Editor is an online code editor for p5.js projects. The editor generates files for a p5.js project with basic configurations: an **index.html** file that includes the p5.js library, a **sketch.js** file with the `setup()` and `draw()` loops, and a **style.css** file with basic styling rulesets. The web editor is helpful if you would like to start creating p5.js sketches off the Codecademy platform with no extra setup. If you [create an account](#), you can also save and share links to your sketches!
